Understanding AP Chemistry FRQs

What are Free-Response Questions?

Free-response questions (FRQs) in AP Chemistry require students to provide written explanations and calculations to demonstrate their understanding of chemical principles. Unlike multiple-choice questions, FRQs test a deeper comprehension of the subject matter, as students must articulate their reasoning clearly and justify their answers. The FRQ section typically consists of six questions, which may include a mix of short-answer and longer, multipart questions.

Structure of the FRQ Section

Students will encounter different types of FRQs throughout the exam. Generally, the questions can be categorized into three main types:

- **Short Answer Questions:** These require concise responses, often involving calculations, explanations, or drawing graphs.
- **Longer Response Questions:** These questions may ask students to analyze a scenario or data set, requiring a more detailed approach and explanation.
- **Experimental Design Questions:** These questions focus on the scientific method, asking students to outline experimental procedures or interpret experimental results.
